# Executive Summary

# Executive Summary

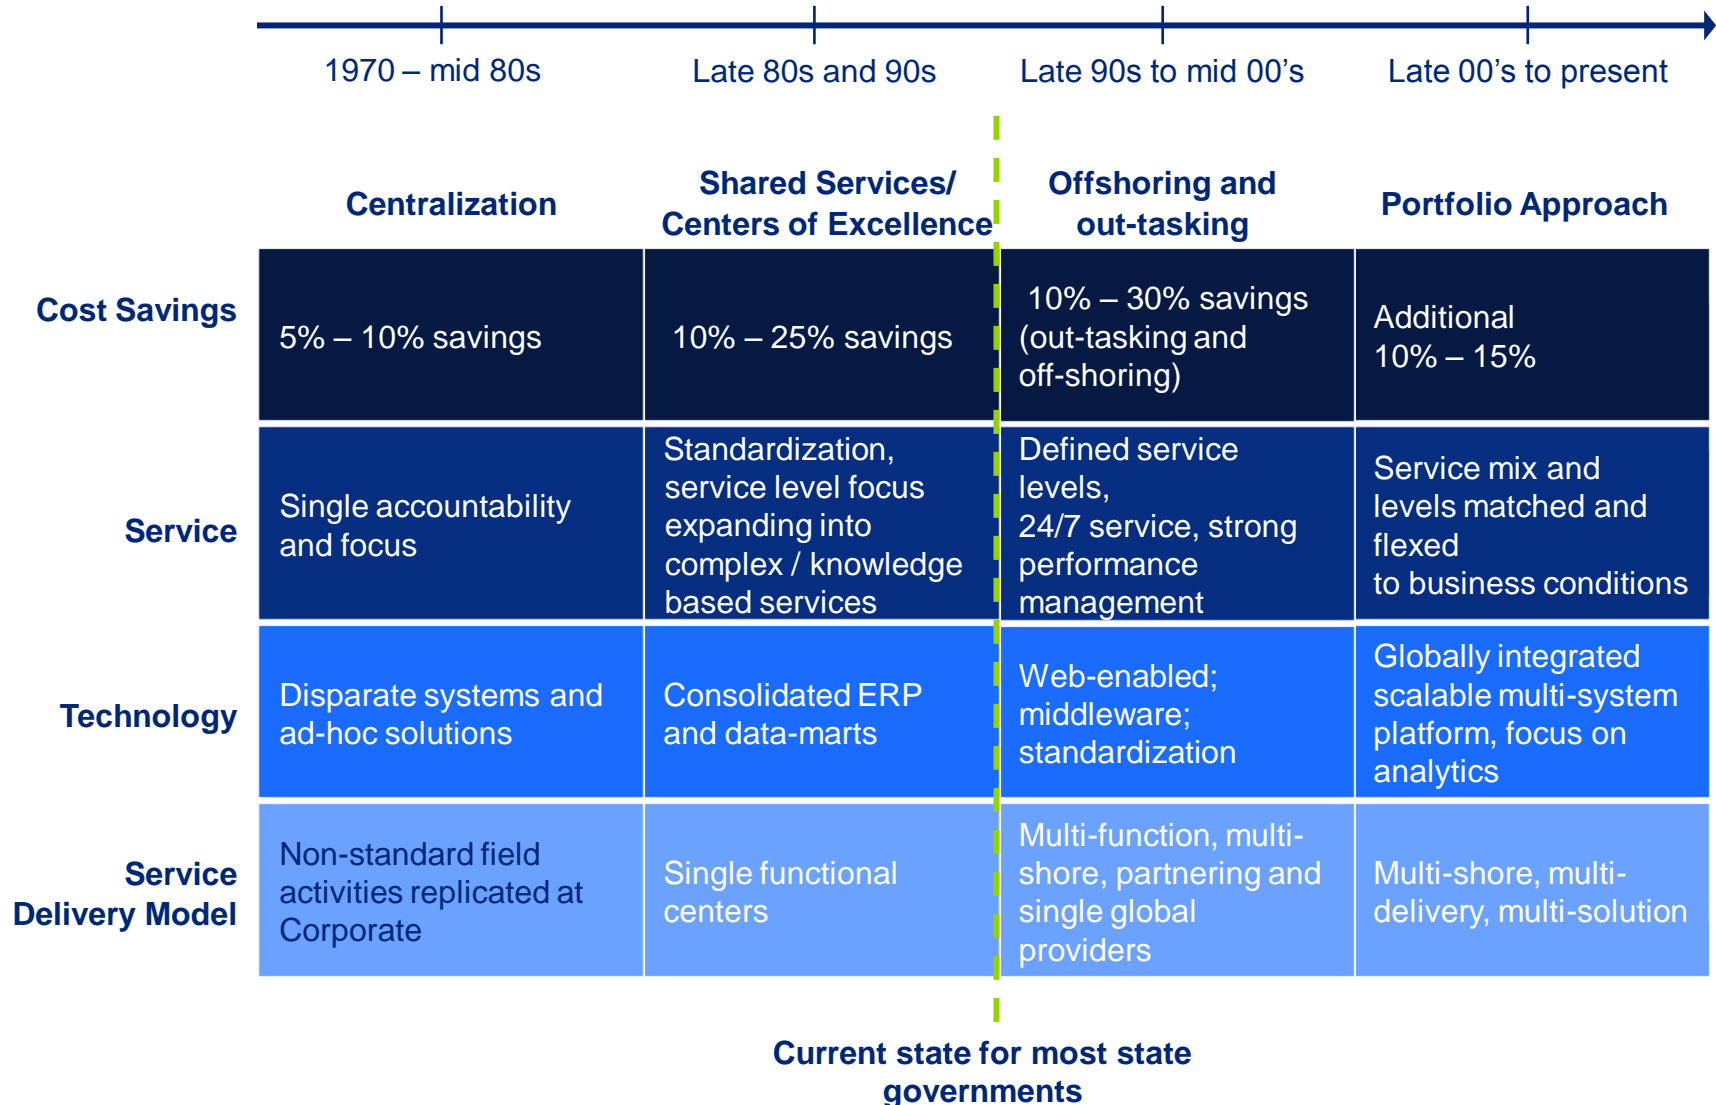

The Provider Management Plan analyzes market trends in IT service delivery and evaluates the current state of Louisiana's IT functions on suitability for out-tasking or further investment in in-house capabilities.

|                                     |  |
|-------------------------------------|--|
| <b>Provider Management Overview</b> | <ul style="list-style-type: none"><li>▪ The marketplace for service delivery has evolved from centralization of authority to shared services to a portfolio approach (i.e., balancing shared services with out-tasked services)</li><li>▪ Out-tasking should not be understood as the absolution of involvement with systems or tools, rather the State must be prepared to aggressively manage contracts and vendors</li><li>▪ The State could use a spectrum of delivery models in the selection of alternative providers</li></ul>  |
| <b>Market Trends</b>                | <ul style="list-style-type: none"><li>▪ According to Deloitte's 2012 Global Outsourcing and Insourcing survey across 10 industry sectors, IT continues to be the most out-tasked business function</li><li>▪ Out-tasked IT is also the business function most likely to be considered for insourcing, primarily due to lack of service quality against expectations</li><li>▪ State IT organizations typically take a range of approaches to IT provider sourcing—from single domain out-tasking to wholesale out-tasking of the entire organization</li><li>▪ States have seen mixed results from their IT out-tasking and there is a lack of evidence of long term return on investment from these types of arrangements</li></ul> |
| <b>Opportunities for Louisiana</b>  | <ul style="list-style-type: none"><li>▪ Build up in-house capabilities in financial, contract, vendor, and project management to support alternative delivery models in the future</li><li>▪ Evaluate existing service costs and staff capabilities of the consolidated IT organization to inform sourcing strategy</li><li>▪ Build holistic sourcing strategy and evaluate initial opportunities identified including: Level 1 helpdesk, data center facilities, hosted IP telephony, web and select application development and maintenance</li></ul>  |
| <b>Next Steps</b>                   | <ul style="list-style-type: none"><li>▪ Determine the future state goals and objectives for each out-tasking opportunity areas</li><li>▪ Conduct a detailed inventory of current IT environment, assets, personnel capabilities, and change management readiness to define scope and timeline for each opportunity</li><li>▪ Develop detailed business cases to determine ROI, risks, and business impacts</li><li>▪ Make decision on whether or not to bring the out-tasking opportunity to market</li></ul>  |

# Provider Management Overview

# Evolution of provider and service delivery approaches

Service delivery has evolved across various industries to a “portfolio approach”, which is defined by balancing shared services operations with out-tasked services.

# Internally managed labor models

The State can use various labor models to support internal provisioning of services.

| Labor Model  | Scope   | Strengths   | Weaknesses   | Factors for Selection   |
|--|---|---|--|---|
| <b>Traditional – Hire and Manage Staff Locally</b> | <ul style="list-style-type: none"> <li>Senior leadership, strategic skills, and any other worker level as appropriate</li> </ul>                          | <ul style="list-style-type: none"> <li>Loyalty</li> <li>Retention of critical skills and knowledge</li> <li>Stability</li> <li>Control</li> </ul>   | <ul style="list-style-type: none"> <li>Fixed costs and inflexibility</li> <li>Cost of recruiting, benefits, retention, and staff training</li> </ul> | <ul style="list-style-type: none"> <li>High control over output</li> </ul>  |
| <b>Staff Augmentation</b>                          | <ul style="list-style-type: none"> <li>Project assignments</li> <li>Fill interim roles</li> <li>Contract to hire</li> <li>Technical / clerical</li> </ul> | <ul style="list-style-type: none"> <li>Flexibility – easy to adjust staff levels and costs</li> <li>Access to technical skills</li> <li>Minimal risk in cases of performance failure</li> </ul> | <ul style="list-style-type: none"> <li>Little to no continuity of company knowledge</li> <li>Contractor motivation / loyalty</li> </ul>              | <ul style="list-style-type: none"> <li>Insufficient in-house resources due to attrition or labor market conditions</li> </ul> |
| <b>Shared Services Center</b>                      | <ul style="list-style-type: none"> <li>Technical or clerical tasks that can be performed remotely</li> </ul>  | <ul style="list-style-type: none"> <li>Reduced costs through scale economies</li> <li>Process optimization</li> </ul>   | <ul style="list-style-type: none"> <li>Loss of control by agency</li> <li>Start-up costs and challenges</li> <li>More generalist staff</li> </ul>    | <ul style="list-style-type: none"> <li>Increased cost due to decentralization</li> </ul>                                      |

# Vendor managed labor models

The State can use various vendor labor models to support alternative service provision.

| Labor Model                                | Scope   | Strengths   | Weaknesses  | Factors for Selection  |
|--|---|---|---|--|
| <b>Consultants and Systems Integrators</b> | <ul style="list-style-type: none"> <li>Project work</li> </ul>  | <ul style="list-style-type: none"> <li>Rapid access to skills and added staff</li> <li>Risks limited to project</li> <li>Highly qualified and capable vendors</li> </ul>                            | <ul style="list-style-type: none"> <li>Higher cost than state resources</li> <li>Loss of information during knowledge transfer to state resources</li> <li>Quality control</li> </ul> | <ul style="list-style-type: none"> <li>Technology new to existing state resources</li> <li>High control required</li> </ul>                    |
| <b>Tactical Out-tasking</b>                | <ul style="list-style-type: none"> <li>Specific applications suites</li> <li>Technology platforms</li> <li>Certain functions</li> </ul> | <ul style="list-style-type: none"> <li>Access to skills and a stable service model</li> <li>Offload non-strategic work</li> <li>Rapid adoption of new technology</li> <li>Cost reduction</li> </ul> | <ul style="list-style-type: none"> <li>Less direct control</li> <li>Can lead to multi-sourcing and governance challenges</li> </ul>   | <ul style="list-style-type: none"> <li>Mature vendor offerings exist</li> <li>Very short deadline for deployment</li> </ul>                    |
| <b>Strategic Out-tasking</b>               | <ul style="list-style-type: none"> <li>Applications and/or Infrastructure for an agency or group of agencies</li> </ul>                 | <ul style="list-style-type: none"> <li>Reduced costs</li> <li>Vendor process maturity</li> <li>Rapid scaling of resources</li> </ul>  | <ul style="list-style-type: none"> <li>Vendor performance</li> <li>Transition risk</li> <li>Cost and performance management</li> </ul>  | <ul style="list-style-type: none"> <li>Technology new to existing state resources</li> <li>Allow redeployment of internal resources</li> </ul> |

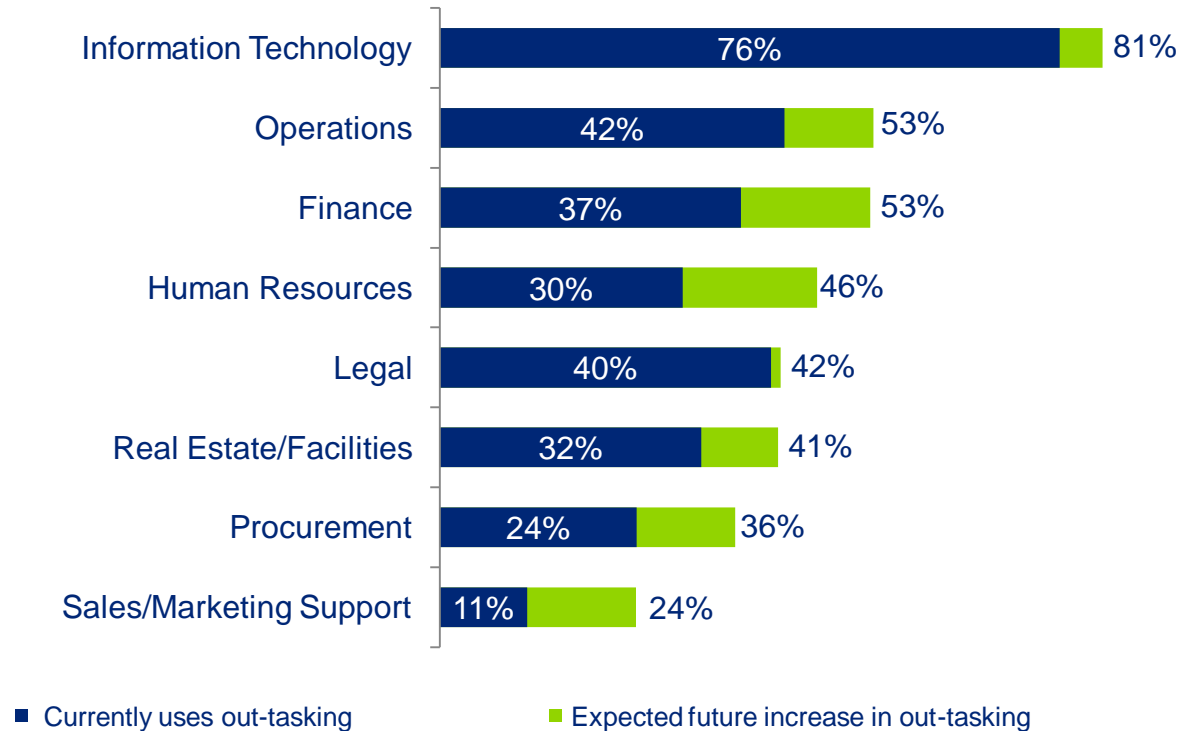

# Market Trends

# IT out-tasking has become commonplace across industries

Deloitte conducts an annual global survey of IT leaders from 10 industry sectors on out-tasking and insourcing trends.

## Business Function Out-tasking

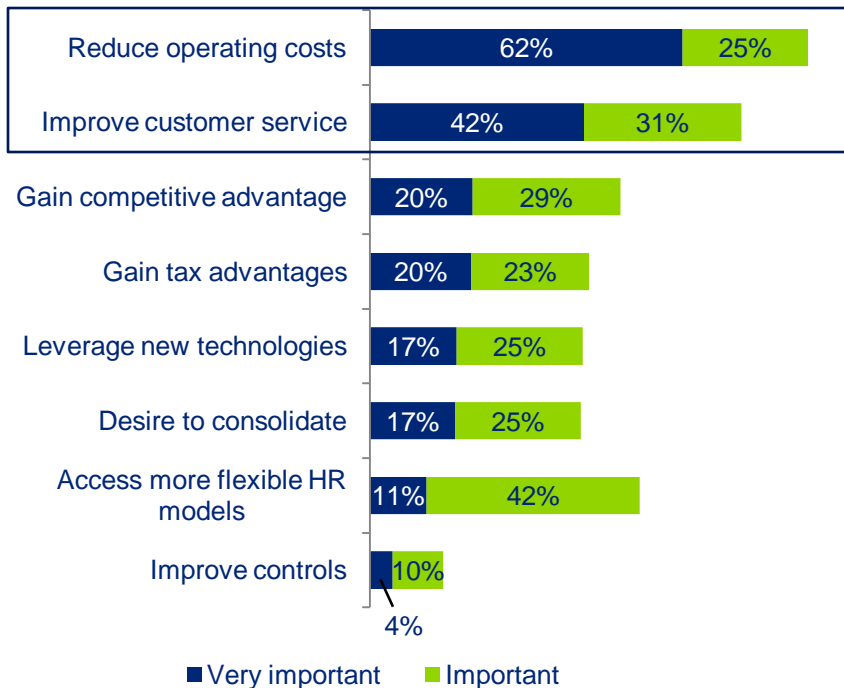

- Information Technology led all functional categories with a combined 76% percent of respondents partially out-tasking the function
- Out-tasked IT was also the function most contemplated for insourcing, primarily due to lack of overall service quality
- The expected future state of all business functions show an increase in out-tasking. Finance and human resources are expecting the largest percentage increase in out-tasking activity

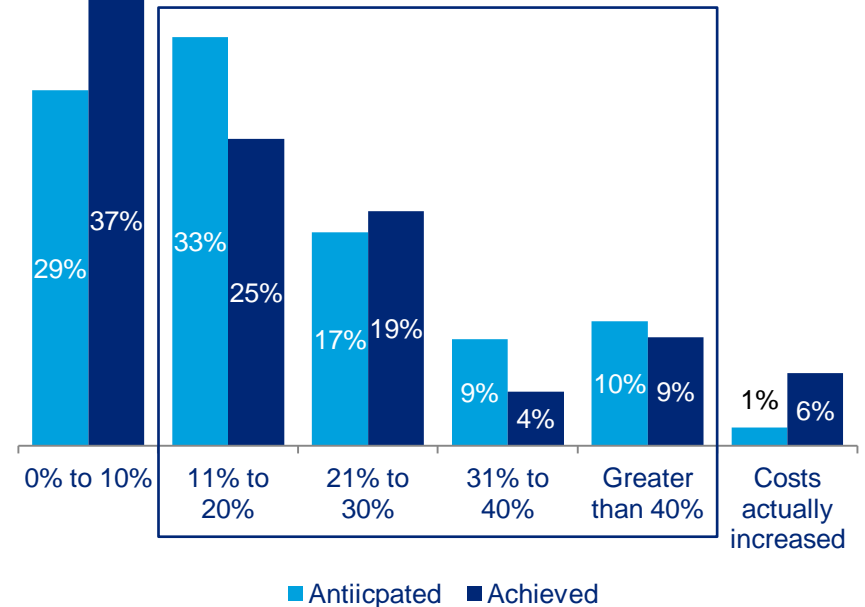

# Though out-tasking is growing, the desired results are not always achieved

Organizations value improved customer service closely behind reduce operation costs as the most prominent drivers for out-tasking. Our survey results indicate that these objectives are not always met. 69% of respondents *anticipated* savings greater than 10%, while only 57% actually *experienced* cost reductions greater than 10%.

## Importance of Out-tasking Objectives

## Cost Reduction Results from Out-tasking Experience

Source: Deloitte 2012 Global Outsourcing and Insourcing Survey.

# Four themes provide insight as to why objectives have not been met

Four common themes emerged for organizations that felt dissatisfied with their out-tasking arrangements.

| Theme                                 | Description   |
|---------------------------------------|---|
| <b>Hidden Costs / Transparency</b>    | <ul style="list-style-type: none"> <li>▪ Pricing concerns influenced 1/3 of contract terminations</li> <li>▪ The top contributor to cost overruns is the service provider underestimating the scope and effort of projects, especially in the public sector</li> <li>▪ The changing mix of fixed (e.g., application support) and variable priced services (e.g., enhancements) leads to higher overall costs than original estimates</li> </ul>   |
| <b>Relationship Management</b>        | <ul style="list-style-type: none"> <li>▪ Inconsistent communication between service providers and clients (29% of respondents) leads to client frustration</li> <li>▪ The lack of a formal vendor management plan will result in many unresolved conflicts and may potentially turn into early contract termination</li> <li>▪ Inadequate transparency and poor or unreliable reporting were also frequent dissatisfactions</li> </ul>  |
| <b>Vendor Support &amp; Resources</b> | <ul style="list-style-type: none"> <li>▪ 3 of 10 organizations experience issues with vendor-provided resources, including lack of knowledge of the client organization's business</li> <li>▪ Lack of service level quality was cited as the primary reason for early contract termination</li> <li>▪ Sub-par vendor performance (38%), sub-par vendor resources (29%), and attrition of key resources (24%) also contributed as top factors of dissatisfaction with recent out-tasking initiatives</li> </ul>  |
| <b>Inability To Transform</b>         | <ul style="list-style-type: none"> <li>▪ Lack of readiness of organization to make change impacts the success of out-tasked arrangements</li> <li>▪ Limited use of upfront technology investments to position the organization to meet necessary business requirements in a consolidated out-tasked model can influence performance</li> <li>▪ Inability of the service provider to drive efficiencies in the inherited IT infrastructure</li> <li>▪ Limited standardization or consolidation leading to reduction in anticipated cost savings or higher operating costs</li> </ul> |

# Out-tasking critical success factors

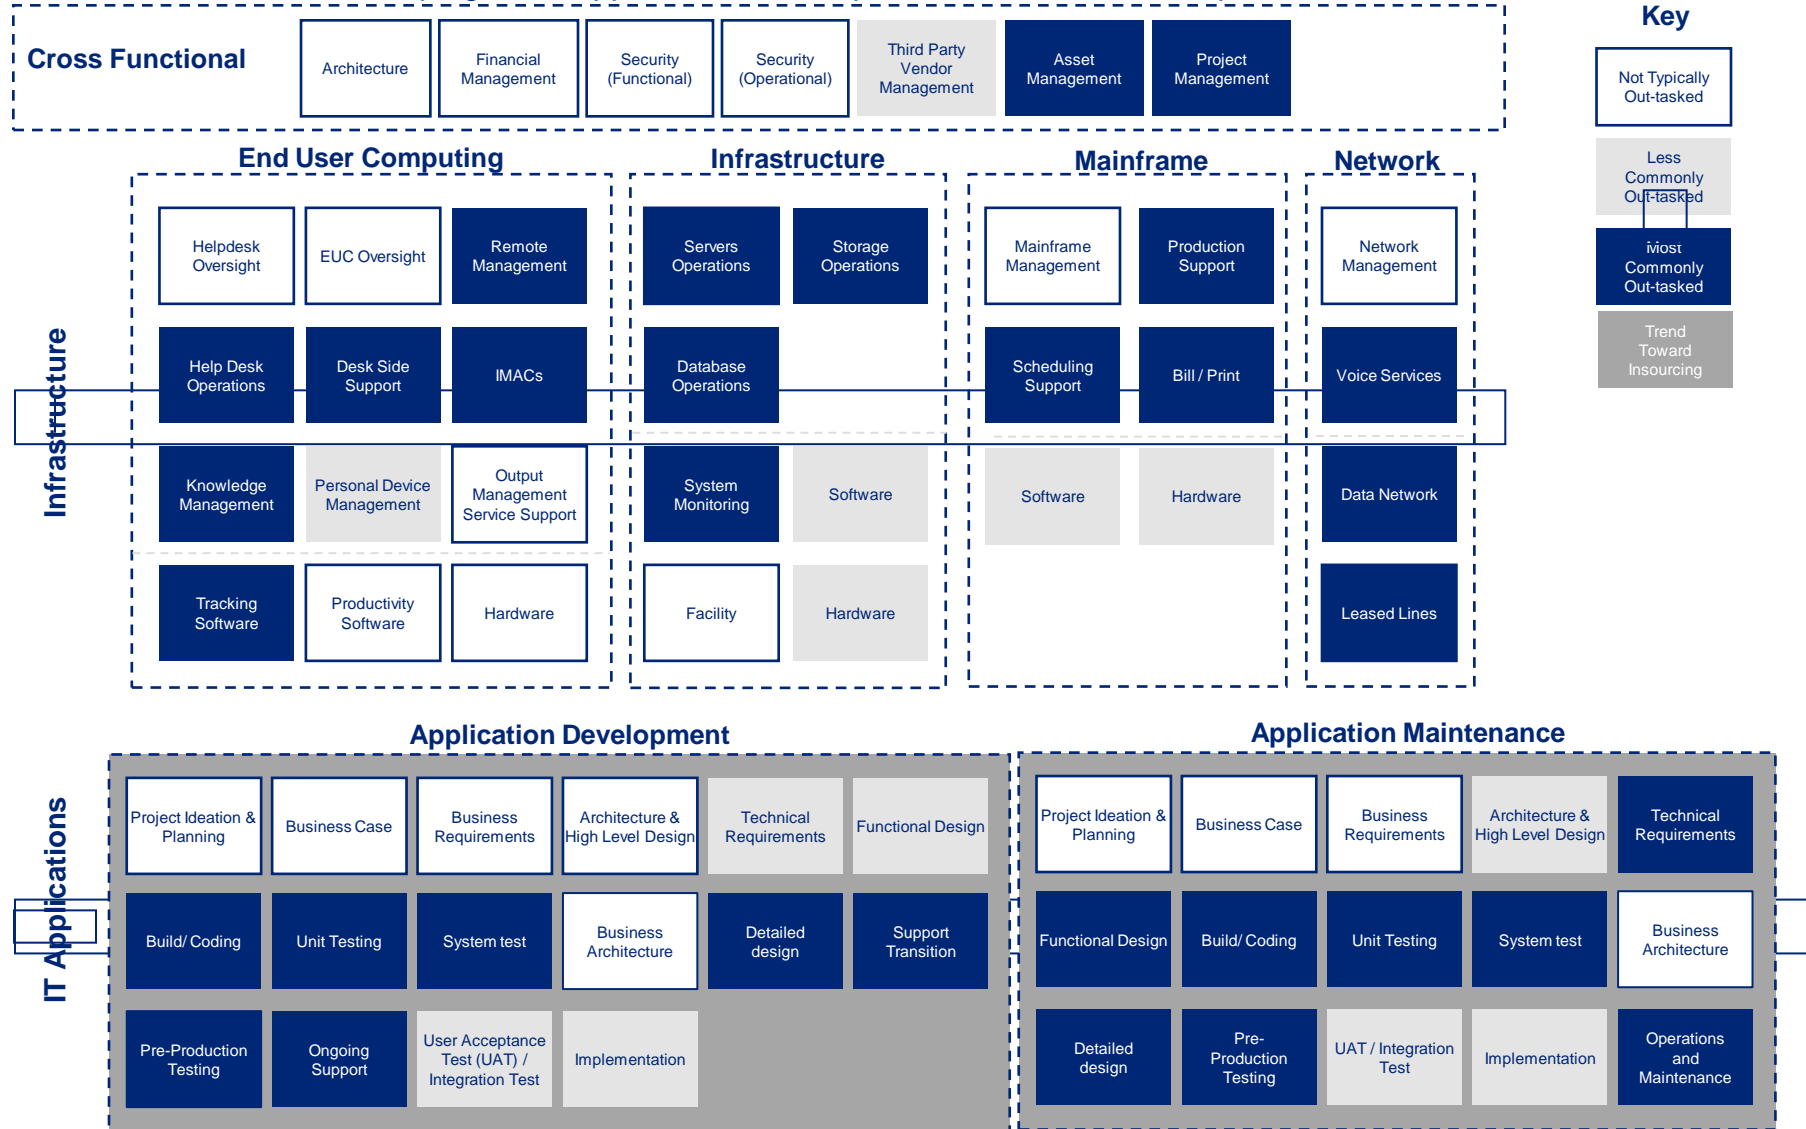

Organizations that have had success with their alternative provider arrangements had certain elements in place prior to going out to bid.

|   |   |
|---|---|
| <b>Strong Governance</b>                    | <ul style="list-style-type: none"><li>▪ Alignment between IT mission and overall State strategy</li><li>▪ Protocols to initiate, approve, manage, and communicate change to the stakeholders (end users, service providers etc.)</li><li>▪ Escalation and issue resolution paths to route major problems up and resolve them</li><li>▪ Regular meeting schedules, formal processes for review, and assessment of the provider performance</li></ul> |
| <b>Clarity on Retained Functions</b>        | <ul style="list-style-type: none"><li>▪ Determination of which service functions are critical to retaining control, agility, cost effectiveness, and service flexibility and will remain in house</li><li>▪ Roles and responsibilities of retained versus out-tasked functions</li></ul>  |
| <b>Effective Vendor Management Function</b> | <ul style="list-style-type: none"><li>▪ Activities and tools from an operational, managerial, and strategic perspective</li><li>▪ Contract and scope management, active monitoring, and management of risks, cost, and quality</li><li>▪ Enforcement of penalties for non-performance and SLAs</li><li>▪ Ability to extract value over and above the contractual vehicle from the arrangement</li></ul>   |
| <b>Effective Contract Provisions</b>        | <ul style="list-style-type: none"><li>▪ Pricing leverage from longer time horizons</li><li>▪ Effective carve out and bundling of services to achieve economies of scale</li></ul>   |
| <b>Clarity on Service Integration</b>       | <ul style="list-style-type: none"><li>▪ Coordination of the interaction of all internal and external service providers with the responsibility of delivery for IT services</li><li>▪ Clarity on hand-offs and service transitions</li></ul>   |
| <b>Streamlined Infrastructure</b>           | <ul style="list-style-type: none"><li>▪ Standardized technologies, integrated infrastructure and enterprise architecture</li><li>▪ Clarity on what assets are owned and their locations and conditions</li><li>▪ Limited in house capabilities or limited existing services or infrastructure</li></ul>   |

# Suitability Assessment

# IT domain out-tasking landscape

Within IT domain areas, certain functions are more commonly out-tasked than others. A trend toward bringing out-tasked work back in-house is developing in the Applications Development and Maintenance space.

# End-user computing drivers

## Considerations

### Benefits

- Increased availability of support (24/7/365)
- Vendors can provide latest support options, such as self-help portals, preventative monitoring, and issue analysis
- Potentially lower costs and higher utilization compared to internal FTEs
- Able to more easily scale up and down to demand

### Limitations

- Turnover of vendor helpdesk staff and lack of control in training can lead to varying levels of service for inquiries
- Variable cost structure could eventually make out-tasking more expensive than maintaining service in house (e.g., higher quality of service leads to more usage and higher costs)

## Service Evolution

### Single Environment Service Desk

- One of the most out-tasked IT capabilities
- Single focus on specific areas such as desktop, laptop, printer, mobile device support, etc.
- Pricing typically on a volume based model since the primary role is to act as the first line of issue resolution for end-user questions

### Multidiscipline Service Desk

- Focus is addressing problem, incident, and service requests that require specialized responses in multiple environments (e.g., front line support, networks, multiple application environments)
- Goal is to achieve higher first-call resolution rates to support end-to-end service levels and use as a means of improving efficiency and customer satisfaction
- Pricing on a per user or device basis to encourage end-to-end support and proactive deployment of self-service solutions to reduce the number of calls reaching the service desk

# Infrastructure drivers

## Considerations

### Benefits

- Potentially lower costs than maintaining infrastructure internally
- Vendors can provide additional services such as security and integration to complement infrastructure hosting and services
- Spend shifts from CapEx to OpEx
- Opportunity to enable scalability of IT applications and increase speed-to-production

### Limitations

- Security concerns due to third-party management of sensitive data
- Service availability dependent on the provider's maintenance schedule; minimal control in the case of unplanned outages
- Existing consolidation efforts of data center operations and network environments can reduce efficiencies of out-tasking

## Service Evolution

### Usage Based Services

- Data centers with assets co-located in physical locations, but controlled by 3<sup>rd</sup> party service provider
- Pricing typically on a per-use (e.g., per instance / image) model, with a fixed baseline of about 80% to 90% of the total contract value

### Managed Services

- Managed services delivery models embed cloud services, such as Infrastructure as a Service (IaaS) or Platform as a Service (PaaS) and support application environments
- Focus on “green IT”, driven by the cost savings of adopting energy-efficient assets
- Pricing evolving to per-user or per-month billing model to allow host organizations more flexibility in volume variability
- Average fixed baseline about 60% to 65% of total contract value

# Mainframe drivers

---

## Considerations

---

### Benefits

- Mainframe space in data centers are freed up, which can be used for alternative expansion
- Vendors provide specific mainframe operations skillsets that may not be prevalent within internal resources
- Staff can concentrate on new systems instead of managing and running mainframe operations
- Vendors can provide higher quality of service with more advanced technology offerings

### Limitations

- Increasing consumption of MIPS or overuse charges could reduce original savings estimates
- Potential for higher investment of time and people in testing and troubleshooting due to poor quality or performance
- Level of knowledge transfer and staff turnover at vendor may impact service quality

## Service Evolution

---

### On-Premise Services

- Mainframe remains in client facility with the vendor managing all operations and technical support
- Cost of services reflective of mainframe usage and maintenance requirements of client's equipment

### Managed Services

- The vendor provides hosting facility for equipment and all operations and technical support
- The majority of mainframe support is done remotely or using remote services, allowing clients to share technical resources and achieve savings through economies of scale

# Network drivers

## Considerations

### Benefits

- Potentially lowers costs for equipment, lines, manpower, and maintenance
- Transfers spend from CapEx to OpEx
- Additional flexibility of resources to respond to shift in demand
- Flexibility for major changes quickly if technology becomes outdated
- Increased mobility and access to media services through IP telephony and unified communications (UC)

### Limitations

- Subject to the support of the vendor and their responsiveness to resolving issues
- May need extra redundancy in the architecture
- Support and enhancements require design and architecture discussions with vendors which can delay project implementations
- Ability to secure a vendor to provide services across a diverse State geography that typically does not have diversity from a telecom carrier perspective

## Service Evolution

### On-Premise Services

- Vendors specializing in data and voice services provide on-premise managed network services in a siloed manner. Responsibility for the end-to-end network integration from an end user perspective falls on the customer
- Telecom carriers provided cost effective Ethernet offerings, regionally or metro, to help clients increase their bandwidth to be able to support latest UC offerings

### Managed Network Services

- Major communications service providers (e.g., AT&T, Verizon), systems integrators (e.g., HP, Xerox) and technology vendors (e.g., Google, Microsoft) are now capable of providing a global cloud UC infrastructure to support large organizations
- Vendors offer SIP trunks to extend IP hosted telephony beyond an organization's firewall without the need for an IP-PSTN gateway
- Vendors can now deploy cross-vendor interoperable solutions (e.g., Cisco Hosted Collaboration System with Google)

# Application development drivers

## Considerations

### Benefits

- Gain greater flexibility and access to a wider talent pool, especially for emerging technologies
- Provides access to the industry-specific expertise
- Allows organizations to capitalize, with minimal financial risk or capital outlay, on rapidly evolving technology areas such as mobile applications and cloud computing

### Limitations

- Potential for increased costs through added enhancements
- Reduced control over service quality
- Custom-built and restricted applications will add complexity or may not be out-tasked at all
- With speed of technology disruption, single vendor out-tasking risks limiting adoption of emerging technologies

## Service Evolution

### Cost Reduction Focus

- Primary focus for application development out-tasking was cost reduction with adoption of 17% between 2009 and 2010, 7% between 2010 and 2011 and 3% between 2011 and 2012
- Out-tasking results indicated 46% of organizations saw an increase in cost and 22% experienced a decrease in service level relative to when the function was performed in-house

### Talent Focus

- About 90% of current host organizations plan to maintain or increase their level of out-tasking for the flexibility in labor and access to expertise in developing technology areas
- Current out-tasking organizations out-task a median of 25% of application development work
- About 10% plan to reduce their application development out-tasking through reduced project work and bringing the function back in-house due to unsatisfactory cost savings and service levels

Source: Computer Economics "Application Development Outsourcing Trends." 2013.

# Application maintenance drivers

## Considerations

### Benefits

- Vendors provide access to tool-specific knowledge to support an array of applications, from legacy to emerging
- Number of in-house staff needed to patch and maintain codes can be reduced
- Access to expertise in emerging application technology (e.g., mobile, social)

### Limitations

- Potential for increased costs if applications are not rationalized before contracting
- Custom-built applications cannot be competitively bid and requires the application developer to perform maintenance
- Multiple vendors required to service an environment hosting a diverse array of applications
- Reduced control over service quality

## Service Evolution

### Corrective Maintenance

- Software providers and resellers provide 24/7 on-call support to respond to requests as they arise
- Key SLAs include system availability and average time to repair
- Maintenance costs typically remain static and predictable
- Public sector leads (64% of respondents) in the likelihood to engage in application maintenance out-tasking, 9% above average of all other industries
- At least 28 states use vendors to support the development and maintenance of web portals

### Performance Management

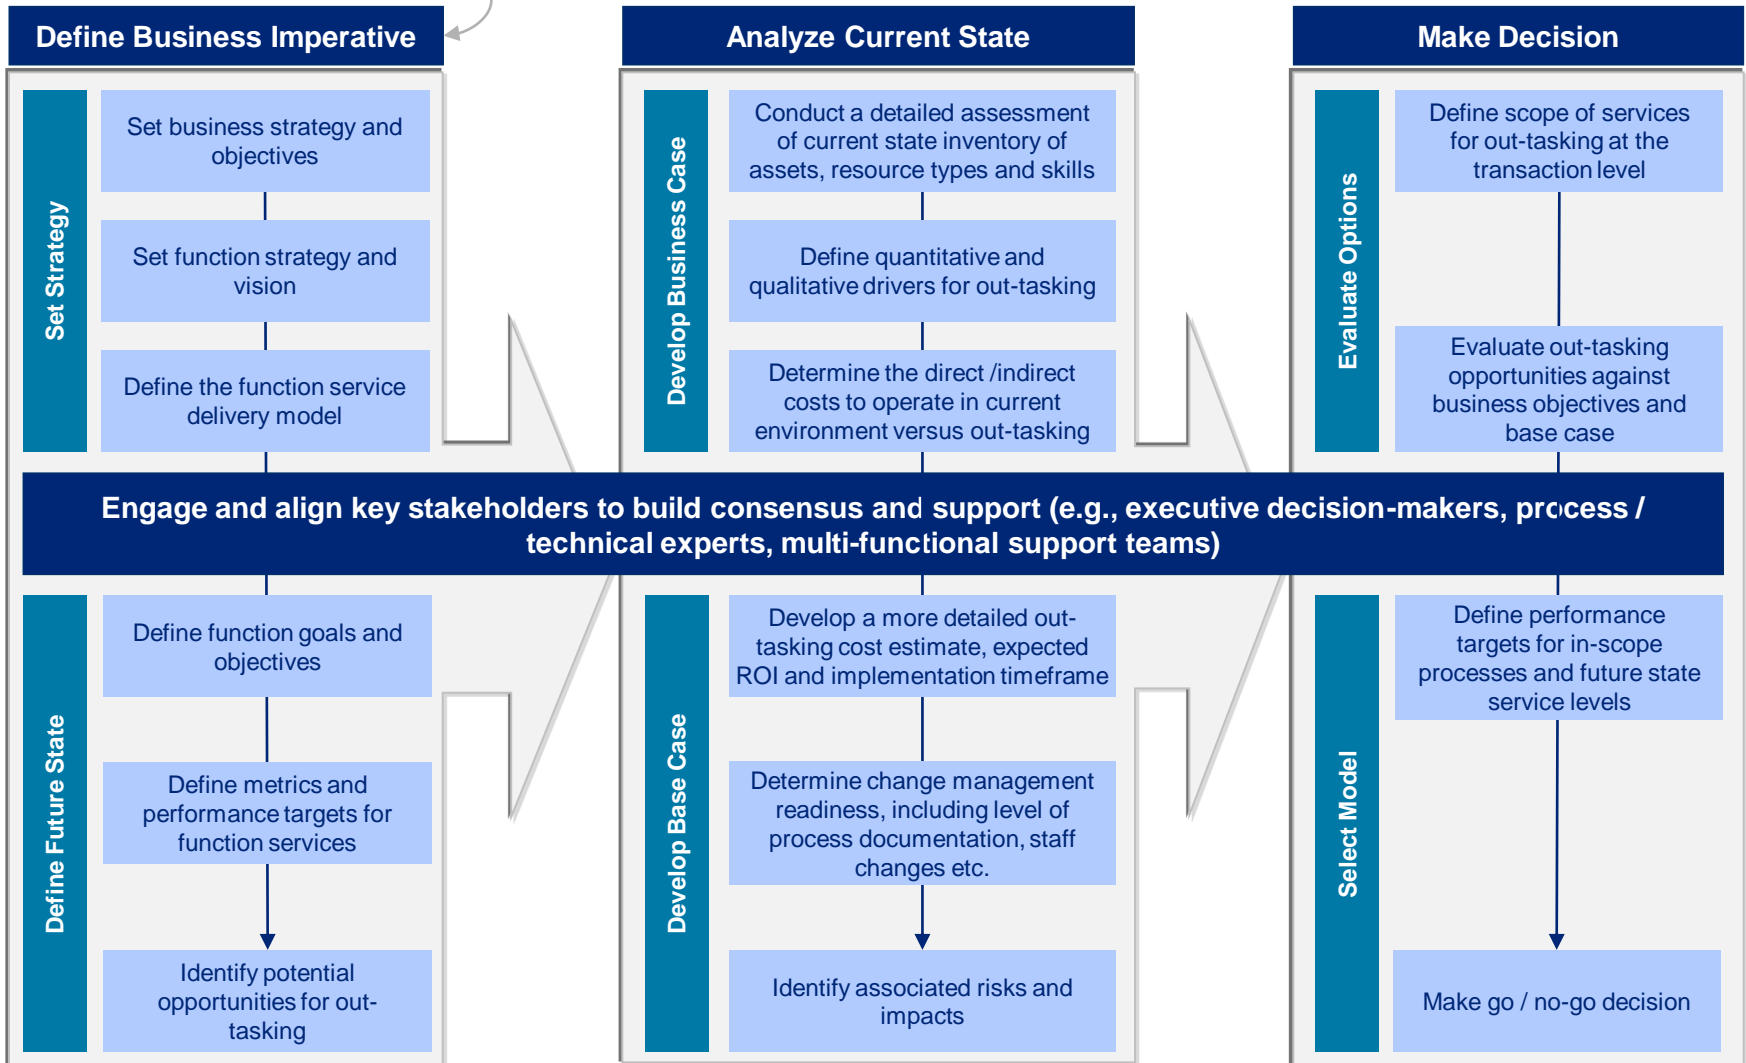

- Vendors provide analysis on enhancements, automation and upgrade opportunities to improve usefulness of application to the organization
- Current out-tasking organizations out-task a median of 28% of application maintenance work
- Vendors can provide detailed reporting and diagnostics, including performance statistics and analysis on problems and needs

Next Steps

# Next steps for evaluation

Louisiana should conduct further analysis to understand current assets and resource capabilities and develop business cases before making any out-tasking decisions on the list of initial opportunities.

State of Louisiana today

# Appendix

# Define Business Imperative: Setting a strategy

Clearly articulating objectives, defining and prioritizing the decision criteria, and establishing guiding principles will focus the effort on the business goals and ensure data driven decision making.

## Sample Objectives

- Improve the quality of service, stabilize operations...
- Develop new capabilities and skill sets to enable growth
- Adhere to new regulatory guidelines

## Understand the Baseline

- Current IT skills, capabilities, and technologies
- Existing internal delivery structure and external vendor providers and delivery terms
- Business requirements, current service, and performance levels

## Potential Decision Criteria

- Improved performance
- Costs of transition versus costs of on going operations
- Speed to market
- Disruption to the business
- Organizational acceptance
- Customer satisfaction
- Sustainability of the new model

## Guiding Principles

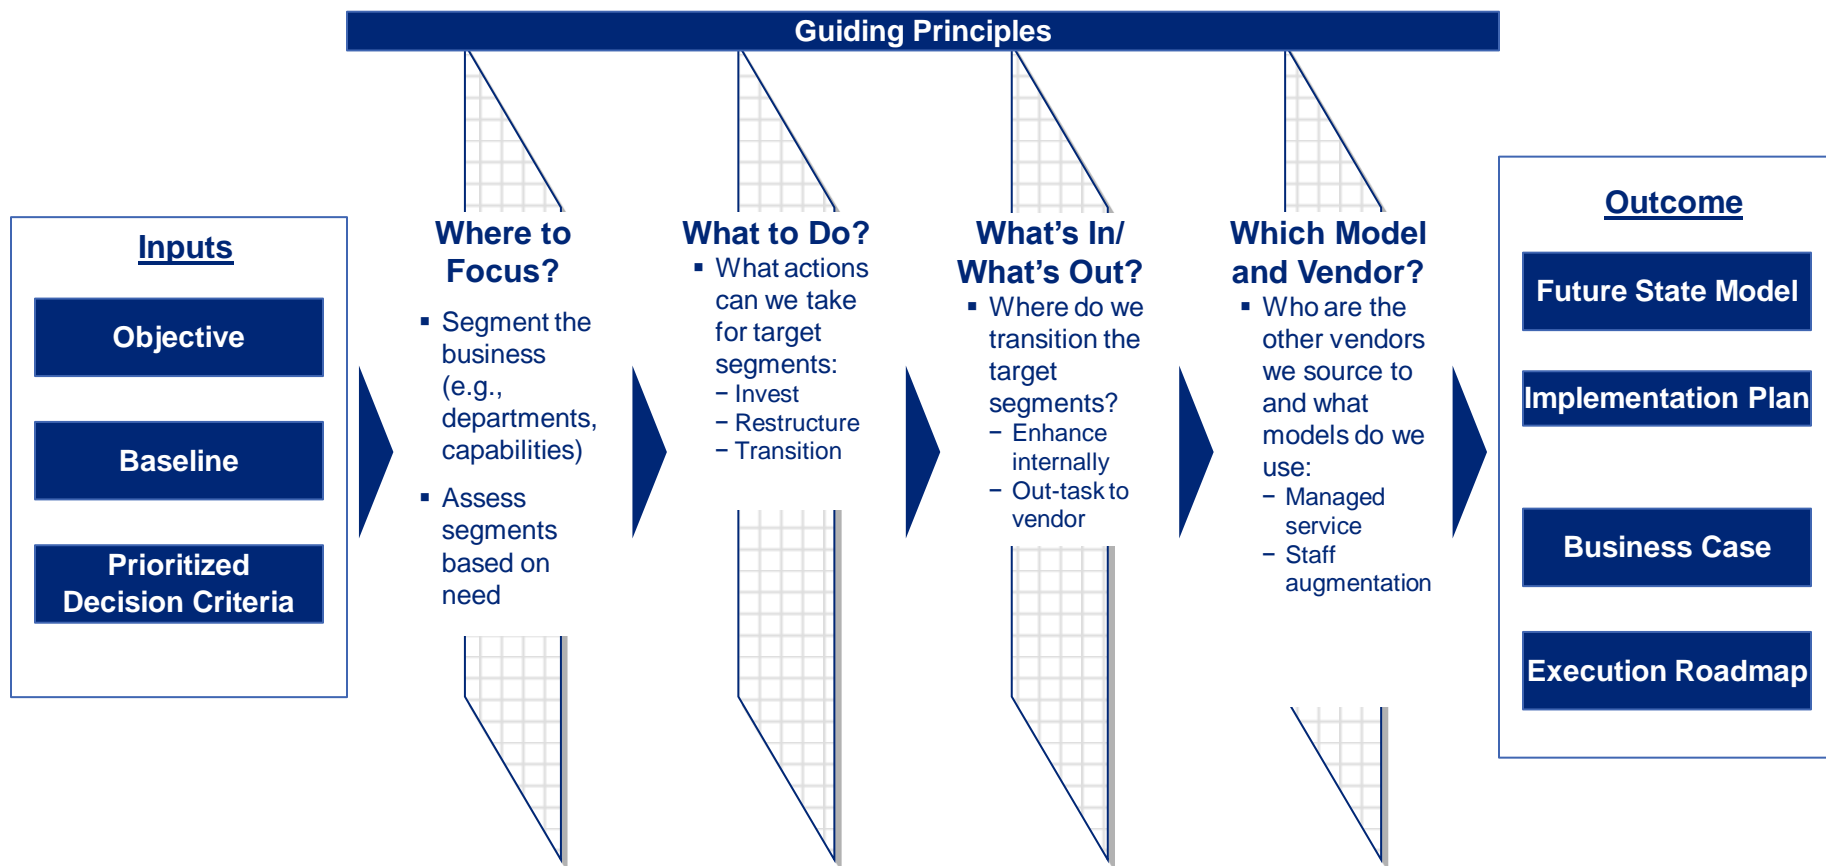

- **Do not start with everything at once.** Set up a logical and deductive method for analysis
- **Focus on the 'high priority, high impact' problems.** Isolate the root of the problem and do not take into account areas that do not need change
- **Consider the realities of implementation.** Focusing on the realistic end result will allow you to make more clear and effective decisions throughout the process
- **Minimize transitions to minimize disruption.** Performing only essential transitions and minimizing them will yield minimal amount of business disruption
- **You may have to live with poor performance in low impact areas.** Do not get bogged down with the small items that have a low impact on the business
- **Fix internal problems as you change the vendor.** Aligning internal processes to best complement the new service delivery infrastructure is critical to its success
- **Be objective.** Objectively consider your own capabilities as you compare internal delivery to external providers

# Define Business Imperative: Defining the Future State

Focusing on four key decisions that will help define the future model.

## Four-Step Filtering Process
